LIGHT HOUSES.**Board of Commissioners for the several Light Houses in the Bay of Fundy.**

Hons. S. L. TILLEY; A. McLELLAN; C. CONNELL; C. FISHER, and JOHN McMILLAN. R. W. CROOKSHANK, Esq., Secretary; GEORGE W. SMITH, Accountant.

Cape Sable Seal Island Light.—The first Light in approaching the Bay of Fundy, is on the South Point of the Seal Island. This is a plain white Light, elevated about 80 feet above high water mark, and may be seen in approaching the Island from any point of the compass. A very dangerous rock, under water, but upon which the sea always breaks, called *Blon's Rock*, lies about $3\frac{1}{2}$ miles S. by W. by compass, from the Light House. Between this rock and the Island, there are some dangers—the ground is rocky throughout, and large vessels, therefore, ought not to attempt passing between them.

Brier Island Light.—In advancing up the Bay, the next Light is situated on Brier Island, about half a mile N. E. from the N. W. point thereof. A plain white light.

Digby Gut Light.—The next light on the coast of Nova Scotia is placed on the west side of Digby Gut—from Brier Island North Eastward. The coast is very bold and not indented; the Light is therefore chiefly intended as a Guide into Digby Basin. A white light.

Gannet Rock Light.—This Light is intended to warn vessels of their approach to a very dangerous range of shoales and ledges, which extend from the Old Proprietor to the Seal Islands off Machias, a distance of about twenty miles. It is a flash light—*white*—twenty seconds dark and forty light in each minute. The Light House is painted in stripes, vertical, black and white.

Bearings and Distances by Compass from the Gannet Rock Light House.

The Light bears from the Light house on Brier Island, N. N. $\frac{1}{2}$ W. 22 miles.

From the Gannet Rock to the Old Proprietor E. $\frac{1}{2}$ S. distance 7 miles.

From the Gannet Rock to the Black Rock, off White Head Island, N. E. $\frac{1}{2}$ E. 7 miles.

From the Gannet Rock to the South West Head of Grand Manan, N. W. $6\frac{1}{2}$ miles.

From the Gannet Rock to the Northernmost of the Murr Ledges, N. W. $\frac{1}{2}$ N. $2\frac{1}{2}$ miles.

To the Southermost of ditto, called St. Mary's Ledge, W. S. W. 2 miles.

From the Gannet Rock to Machias Seal Island, W. and by N. $\frac{1}{2}$ N. 13 miles.

NOTE.—Between the Northernmost and Southermost of the Murr Ledges, there is a range of dangerous rocks and shoals, many of them always above water, and which extends Westward from the Light House about four miles; from this range, farther Westerly, about six miles from the Gannet Light, lies a dangerous breaker called the Bull. This may be avoided by keeping 3 remarkable headlands near the S. W. end of Grand Manan open.

From Brier Island Light to Old Proprietor, N. and by W. $\frac{1}{2}$ W. $18\frac{1}{2}$ miles.

The Blonde Rock from the Southermost point of the Cape Sable Seal Island, S. and by W. $3\frac{1}{2}$ miles distant.

Machias Seal Island Lights.—There are two fixed white lights upon the Machias Seal Islands, elevated about forty-five feet above high water, and bear from each other E. S. E. and W. N. W. distant about 200 feet, by which circumstance of two Light Houses at the same station, they will be immediately distinguished from all other lights upon the coast, (British or American) Both the Buildings are painted white. The following are the bearings from them, viz:—

To the Southernmost Murr Ledge, (St. Mary's) E. S. E. easterly.

“ Gannet Rock Light, E. by S. $\frac{1}{2}$ S. 13 miles.

“ Southern Head of Grand Manan, E. by N. $\frac{1}{2}$ N.

“ Northern Head of Grand Manan, N. E. $\frac{1}{2}$ E.

“ N. E. Rock, distant 2 miles, N. E. by N.

“ Little River Head, N. by W.

“ Libby Island Light House, (American), N. W. by W.

Vessels standing to the Northward, between these Lights and the Gannet Rock, should tack or haul off the moment they bring these Lights in one, as they will not then be more than three fourths of a mile from the Murr Ledges, if more than five miles to the East of the lights.

[It is recommended that the Ship's Compasses should be well compared and adjusted (particularly in new Ships.) before they leave Partridge Island, as serious errors have frequently occurred from want of attention on this point; and as the variation in the Bay of Fundy is seventeen degrees Westerly, or $1\frac{1}{2}$ points) it will be found by the latest published Admiralty Charts, that the course from Partridge Island down the Bay (South Channel) between the old Proprietor, and N. W. Ledge, is S. W. $\frac{1}{2}$ S., but the course to be steered must depend on the direction of the wind on leaving Partridge Island.]

Head Harbour Light.—Next in order after passing Grand Manan and the plain white Light, (American) on West Quoddy Point, is Head Harbour Light. This is placed on the North East extremity of Campo Bello, and is a guide to vessels entering the main Channel to West Isles, Moose Island, and the inner Bay of Passamaquoddy; it enables vessels also at all times to enter Head Harbour—it is a fixed *white* light. The building is painted white, with a red cross on it.

Point Le Preau Lights.—Upon this projecting head land two lights are placed, one above the other, in the same house, and distant 28 feet—Both lights can be seen from every point of the compass, where they may be useful—both are fixed and *white*. The Light House is painted red and white, in stripes of five feet broad each, horizontally.

Partridge Island Light.—This light at the entrance of the River and Harbour of Saint John, having been established upwards of forty years, requires no particular notice, further than that it is a fixed *white* light, and that the Light House is red and white, in vertical stripes.

A Fog Horn or Steam Whistle (the first of the kind ever used for this purpose) was placed on Partridge Island, near the Light House, in Sept. 1860, and is sounded at intervals of 10 seconds in every minute, during the prevalence of Fogs and Snow Storms. The whistle can be distinctly heard at the distance of four to six miles.

There is also a *Bell Buoy* anchored at extremity of the Ledge at the eastern end of the Island, which is very useful to vessels in thick or rough weather. The sound of the Bell can be heard three miles distant.

Beacon Light.—Within Partridge Island, and upon a Spit or Bar which extends about half a mile S. S. E. off Sand Point, and which dries at two thirds ebb, stands the Beacon Tower. Upon this Tower a light is established, which is eminently useful to the coasting trade at Saint John, and to all other vessels having pilots on board, as it enables them to enter the harbour at all hours of the night. A fixed *white* light. The house is white and black, in stripes vertically.

Quaco.—A revolving *white* light is placed on a small rock off Quaco Head, showing twice full and twice dark in a minute. This light can be seen from any quarter where a vessel can approach. The Light House is painted white and red in horizontal stripes.

Cape Enrage Light.—On the point of that name, in Westmorland, nearly opposite Apple River Harbour, N. S. A plain *white* light. The House is painted white, and is about 120 feet above tide mark.

West Quoddy Light.—This is an American Light, and is placed on the West side of the entrance into the Saint Croix by Lubec and Eastport.

Cape Forchu Light.—On Cape Forchu, on the western side of the entrance to Yarmouth (Nova Scotia,) in lat. 43, 39, N. long. 66, S. W. It exhibits a plain revolving light—visible one minute and a quarter, and invisible half a minute. The building is painted white and is elevated 135 feet above the level of the sea.

Grindstone Island Light.—An Octagonal Tower, sixty feet above the level of high water on Grindstone Island in Chignecto Bay, in lat. $45^{\circ} 43' 13''$ N. long. $64^{\circ} 37' 25''$ W. The Tower is painted white, as is also the Keeper's house, one story, situate about 50 feet to the Eastward of the Tower.

Bearings and distances of several places from the above Light House, as follows :—

Cape Enrage Light by compass, S. $61\frac{1}{2}$ W. 10 1-7 miles.

Highest point of St. Mary's Ledge by compass, N. 40 W., 6-10 miles.

The point of low water off the Light House, by compass, S. 78 W., 2-10 mile.

Jones' Ledge, N. 10 W., 3-10 mile, it dries at low springs and has about $2\frac{1}{2}$ fathoms on it at half tide.

The Sand Bank, S. 15 W., 3-10 mile, it has $1\frac{1}{2}$ fathoms on its shoalest part at low water springs.

Grand Manan.—There is a Light House and Keeper's House at the "Swallow Tail" on the North Eastern part of the Island of Grand Manan, in the Bay of Fundy. The Light is 45 feet from Base to Deck; the point on which it stands is 103 feet above high water, making 148 feet elevation. This is a conspicuous mark in the South Channel between Brier Island and Grand Manan. Both Houses are painted white.

Richibucto Head Light.—This is a fixed White Light, situated on Richibucto Head, Northumberland Strait, in the Gulf of Saint Lawrence. The light is placed at an elevation of 70 feet above high water, and should be seen in clear weather from a distance of 14 miles. The illuminating apparatus is dioptric or by lenses of the fourth order. The tower is square, about 50 feet high from base to vane, painted white, and stands in lat. $46^{\circ} 39' 40''$ N., long. $64^{\circ} 43' 30''$ W. of Greenwich.

1st Month.

JANUARY, 1867.

31 Days.

JANUARY, the first month in our present calendar, was also the first month in the Roman calendar. It was not the first month of the year in Britain till 1752, when the legislature, by an act passed in the preceding year, altered the mode of reckoning time from the Julian to the Gregorian style. At this time it was directed that the legal year, which then commenced in some parts of the country in March, and in others in January, should universally be deemed to begin on the first of January.—January derives its name from Janus. Macrobius expressly says it was dedicated to him because, from its situation, it might be considered to be retrospective to the past, and prospective to the opening year.—It consists of thirty-one days, though originally of only thirty days. The Anglo-Saxons called January *Wolf-monath*.

2nd Month.

FEBRUARY, 1867.

28 Days.

FEBRUARY, the second month of the year. Its name is derived from *februo*, to purify or cleanse. The Saxons called it *Sol-monath*, because the sun's meridian altitude visibly increases in it.

February was not in the calendar of Romulus. It was added to the year by Numa, who gave it the twelfth place in the calendar. The Decemviri transferred it to the place where it now stands. Numa assigned twenty-eight days to it, in order that the sum of the year might be an uneven number, according to a Pythagorean fancy. In an ordinary year, February has twenty-eight days; in bissextile, or leap year, it has a twenty-ninth day.

MARCH, 1867.

31 Days.

MARCH, the third month of the year, according to modern computation, contains thirty-one days. The Roman year originally began with March, and was in fact so considered in England before the alteration of the style, the legal year commencing on the 25th of March. Our Anglo-Saxon ancestors called it most commonly *Hlyd-monath*, loud or stormy month; and sometimes *Rhæd* or *Rhæd-monath*, which some interpret *Rhedas*, others *Rhede* or *Rethe*, the rugged or rough month. The name of the month is said to be derived from that of Mars, the god of war.

Ray, in his Collection, has this proverb, relating to this month:—"A bushel of March dust is worth a king's ransom," thereby expressing the importance of dry or dusty weather at this particular season of the year, in an agricultural point of view.

4th Month.

APRIL, 1867.

30 Days.

APRIL, the fourth month of the year, consists of thirty days, which was the number said to be assigned to it by Romulus. Numa Pompilius deprived it of one day, which Julius Cæsar restored, and which it has ever since retained. In the original Alban or Latin calendar, April held the first station, and then consisted of thirty-six days. Its name is usually considered to have been derived from *aperire*, to open; either from the opening of the buds, or of the bosom of the earth in producing vegetation. The Anglo-Saxons called it *Ooster* or *Easter-monath*. In this month the sun travels through parts of the signs of Aries and Taurus, that is to say, of those parts of the *celestic* which astronomers designate by those names. The real motion of the sun among the constellations is through parts of Pisces and Aries.

MAY, the fifth month of our present year, was the second in the old Alban calendar, the third in that of Romulus, and the fifth in the calendar of Numa Pompilius. In the Alban calendar it consisted of twenty-two days; of thirty-one in the calendar of Romulus; and of thirty in that of Numa.—Julius Caesar restored to it the odd day of which Numa had deprived it, and of which it still keeps possession.—Its etymology is doubtful. Ovid proposes three derivations: one from *majestas*; another from *maiores*, a term which signified the *patres*, or governing body of the city of Romulus; and the third from *Maia*. The Roman month was under the protection of Apollo.

Our Saxon ancestors, after the Romans, called it *Maius-month*; and, in their native language, *Tri-milchi*, three-milk month, when cows were milked three times a day.

JUNE, the sixth month of the year, named from the Latin Junius. Ovid makes Juno assert that the name was expressly given in honor of herself.—Those who derive the name from Junius Brutus, who began his consulship in this month, forget that, according to tradition, it had received the appellation long before.—In the old Latin or Alben calendar, June was the fourth month, and consisted of twenty-six days. Romulus is said to have assigned to it a complement of thirty days. Numa, who named it the sixth month, deprived it of one day, which was restored by Julius Caesar, since which time it has remained undisturbed.

The Anglo-Saxons had several names for the month of June. They called it *sear-month*, dry month; *midsummer-monath*, midsummer month; and *ceralitha-monath*, the earlier mild month, in contradistinction to July.

7th Month.

JULY, 1867.

31 Days.

JULY, now the seventh, was originally the fifth month of the year, and was called by the Romans, in regard to its numerical station, *Quintilis*.—Mark Antony altered the name to Julius, the gentile name of Caius Caesar, the Dictator, who was born in it.—In the old Latin calendar, Quintilis had a complement of thirty-six days. Romulus reduced them to thirty-one; Numa to thirty; but Julius Caesar restored the day of which Numa had deprived it, which it has ever since retained.—Our Anglo-Saxon ancestors called July *Mæd-monath*, mead-month, from the meads being then in their bloom; and *æftera-litha-monath*, the latter mild month, in contradistinction to June, which they considered and named as the 'the former mild month.'

On the 3d of this month the Dog-days are supposed to begin.

The month of AUGUST was originally called Sextilis, being the sixth month in the Alban or Latin calendar; and this name, as is stated, it retained in the calendars of Romulus, Numa Pompilius, and Julius Caesar. Since Numa's reform, however, it has held only the eighth place in the series of months. In the Alban calendar, Sextilis consisted of 28 days; in that of Romulus, of 30; Numa reduced the number to 29; Julius Caesar restored it to 30; and Augustus Caesar, from whom it derived its new name of August, extended the number of days to 31, which has continued ever since.

Our Saxon ancestors named August the 'weed-month,' as abounding in noxious and useless herbs.—Lammas day, the first of the month, is also called the Gule of August, probably from the Gothic *Hiol* or *hul*, a wheel, indicating that revolution of season which brought the return of harvest.

SEPTEMBER, the ninth month, as the year is now divided by European nations. It consists of thirty days. Etymologically, the name is improper, being a Latin term formed of *septem*, seven, and the termination *ber*; and the same impropriety belongs to October, November and December. The Roman year originally commenced in March. The legal year in England was not made to commence on the 1st of January till the alteration of the style in 1752. The Saxons called it *Gerste-monath*, or barley-month, *gerste* being the original Saxon name for barley, which was the chief grain cultivated by the Saxons, and commonly harvested in this month. *Gerste* is still the German name for barley, which name seemed to be a corruption of *beer-legh*, a term which the Saxons applied to the grain from its use in making beer.

10th Month.

OCTOBER, 1867.

31 Days.

OCTOBER, in the year of Romulus, was strictly what its name implies, the eighth month. With us it is the tenth. Domitian, who was born in this month, gave it his own name; but it lasted during his life only, Antoninus Pius, in honor of his wife Faustina, called it 'Faustinus;' and the flatterers of Commodus assigned to it one of their patron's epithets 'Invictus.'

Our Anglo-Saxon ancestors called it *se teotha monath*, the tenth month; they also gave it the name of *Winter-fyllith*, winter-beginning.

NOVEMBER, the eleventh month of the Julian year, was the ninth in the year of Romulus, whence it received its name. This name was assigned to it in the Alban calendar. It originally consisted of thirty days, which were continued by Romulus and Numa. Julius Caesar gave it another day, but Augustus reduced it again to thirty, and this number it has ever since retained.

Our Saxon ancestors called November *Blot-month*, blood month, the month of sacrifice, because at this season the heathen Saxons made a provision for winter, and offered in sacrifice many of the animals which were then killed.

Martlemass or Martinmass beef, cured about the festival of Saint Martin, the 11th of this month, was a provision formerly well known, and in some places still known.

12th Month.

DECEMBER, 1867.

31 Days.

DECEMBER. This month still retains the original name assigned to it in the Alban, and first Roman calendar adopted, according to tradition, by Romulus, in both of which it was the tenth, as the name signifies, or last of the year. Our Saxon ancestors called it *mid-winter* month, and *yule-month*, from a wheel, emblematical of the sun's revolution or return in his annual course.

December was anciently consecrated to Saturn. In the Alban calendar this month consisted of thirty-five days. Romulus reduced it to thirty; and Numa to twenty-nine days. Julius Cæsar restored the day of which Numa had deprived it; and Augustus added another day, which it still retains.
